TranslateY(14)

RotateRight

RotateLeft

Layers: a watermark under the content and a stamp over it

The primary layer sets the size. The layer before it is drawn underneath, the one after it on top, and both cover the same area.

Inlined: items that wrap like words

invoice report catalogue net8.0 net9.0 net10.0 trimmable native AOT MIT Placeholder

MultiColumn: text flowing through three columns

PdfPecker.Fluent writes HTML and CSS and lets PdfPecker lay it out, so multi-column text, transforms and layers are the CSS features PdfPecker already renders. Nothing here needs a browser, a native library or a second package. The columns share the text equally, and the gap between them is twelve points.

Text: clamped lines, first-line indent, decoration styles and word spacing

ClampLines(2) keeps a long product description to two lines and ends it with an ellipsis when it is cut, which keeps cards…

A paragraph whose first line is indented by sixteen points, as in a book, while the lines after it start at the margin again.

wavy dashed dotted ~~double~~ thick word spacing

Shadow, single rounded corners, dashed lines and an aspect ratio

Shadow

two corners

16:9

ZIndex, Unconstrained and DebugArea

DebugArea

An outlined, labelled slot while building a layout.

Unconstrained badge on top

Content under the badge

EnsureSpace(160): this heading starts a new page, because less than 160 pt is left on this one.

The paragraph after it follows it onto the new page.
