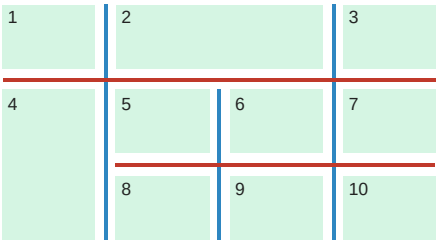
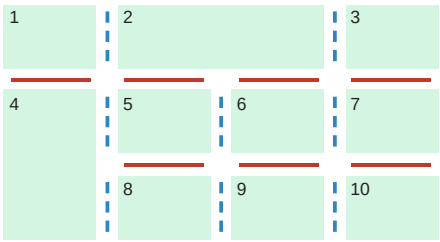
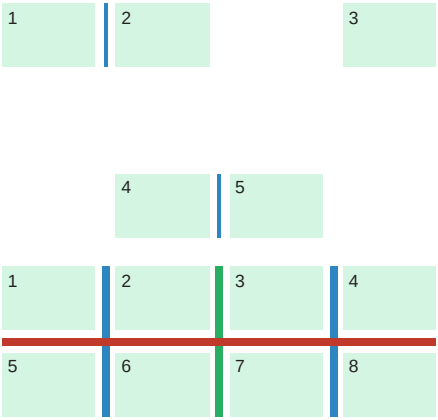
Gap decorations

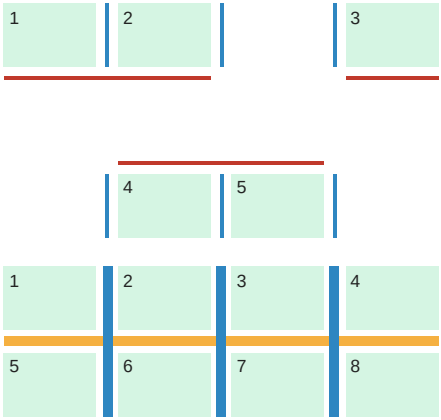
Grid: rules break at spanning items (rule-break: normal), and with intersection at every crossing



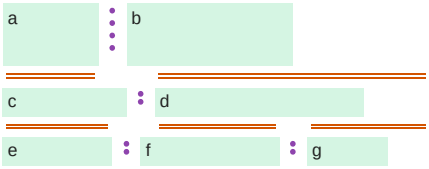


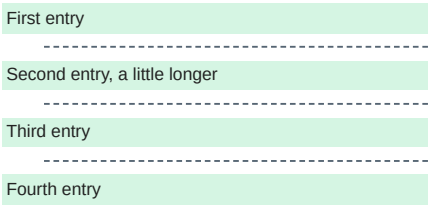
Empty cells (rule-visibility-items: between and around), overlap-join, lists and rule-overlap





Flex: a wrapped row and a column list





Multi-column: alternating colours and insets

Gap decorations draw a line in the middle of each gap between the columns of a multi-column box, and now also between the tracks of a grid and the items and lines of a flex container. A list of colours gives the gaps their values in turn, and the rule-inset properties move the ends of each line.
